Subject: Labelling of Genetically Altered Foods

Sensitivity: Personal

To Whom It May Concern:

It was recently brought to my attention that Codex is presently debating the issue of whether or not to mandate labelling of genetically altered foods.

As a citizen, a consumer, and a health-conscious individual, it is my plea to you that such labelling become mandated. Genetic Engineering is not yet a perfect science, if ever it will be. To not supply the consuming public with this knowledge may end up meaning complicity in great harm, possibly even death.

Please consider this position as the only tenable one concerning an issue with such global ramifications.

Sincerely,

Jordyn M. Bonds
